

Special Issue

Pseudorabies Virus Infections

Message from the Guest Editor

For this special Issue of Pathogens, we invite you to submit either an original research article or a review summarizing different facets of pseudorabies virus infection. Manuscripts highlighting the common aspects and differences in PrV replication, basic mechanisms of herpesvirus infection *in vitro* and *in vivo*, its interaction with the host immune system, the widespread application as tracer for identification of neuronal networks, the use as vectored vaccine, and the molecular basis for the massive outbreaks of disease are very welcome. We look forward to your contribution.

Guest Editor

Dr. Barbara Klupp

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief
