Respiratory Tract Infections in Children

Message from the Guest Editor

Respiratory tract infections are a major threat of morbidity and mortality, especially among children, and in the era of the COVID-19 pandemic, they have come into major focus in the scientific world and the public. It is for this reason that we have decided to launch a new Special Issue on “Respiratory Tract Infections in Children”, to which we are inviting scientists with a pediatric and/or infectious disease background to submit manuscripts dealing with clinical as well as experimental data. Recent clinical data demonstrating the role of pathogens and pathogen interaction in the respiratory tract are particularly welcome. This Special Issue also aims to shed light on the cellular and molecular interaction between pathogens and the host, as well as viral–viral and bacterial–viral interaction. Finally, the role of respiratory microbiome is in this context also of particular interest. Both original research and review articles are welcome. We look forward to receiving your contribution to *Pathogens*.

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief
