Transcriptome Analysis of Viruses

Message from the Guest Editor

The current COVID-19 pandemic underscores the importance of the RNA-level analysis of viruses. Understanding the molecular mechanisms of small pathogens is essential for developing a defense strategy against them. Rapidly evolving sequencing technologies (including RNA sequencing) and bioinformatics have revolutionized the field of molecular virology. Next- and third-generation sequencing approaches enable us to analyze thousands of transcripts simultaneously. Third-generation long-read sequencing (LRS) has opened new avenues for a comprehensive understanding of how genes are expressed and connected with each other. Such as the single-molecule real-time (SMRT) technique from Pacific Biosciences, the nanopore sequencing method from Oxford Nanopore Technologies, and LoopSeq synthetic long-read sequencing from Loop Genomics allows distinguishing between transcript length variants, including splice and length variants, embedded RNAs, polycistronic transcripts, and alternatively spliced transcript isoforms. This Special Issue aims to provide in-depth knowledge and an overview of the current results, focuses, and future directions of current research projects.

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Prof. Dr. Hinh Ly

Department of Veterinary and Biomedical Sciences, College of
Veterinary Medicine, University of Minnesota, Saint Paul, MN 55108,
USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
