

Special Issue

Waterborne Zoonotic Pathogens

Message from the Guest Editors

Waterborne diseases are constantly occurring, despite improved water processing and sanitation practices. Waterborne zoonotic pathogens, including bacteria, viruses, protozoa, and parasitic helminths, constitute a public health risk worldwide, being transmitted from animals to humans through the food chain, in particular through the consumption of contaminated water, fruits, and vegetables, as well as through direct contact with contaminated recreational waters. This Special Issue on "Waterborne Zoonotic Pathogens" addresses cutting edge research and review articles from leading scientists in the field of food and waterborne infections.

Guest Editors

Prof. Dr. Chrissanthy Papadopoulou

Dr. Vangelis Economou

Dr. Hercules Sakkas

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
