Special Issue

Trypanosoma cruzi Biology, Pathogenesis and Promising Therapeutic Candidates for Intervention

Message from the Guest Editors

Trypanosoma cruzi is a protozoan parasite that causes Chagas disease, or American trypanosomiasis, which is widely spread in Latin America. The pathogenesis of Chagas disease is complicated and multifactorial, and involves many interactive pathways. The current therapy for Chagas disease is limited and unsatisfactory. Therefore, this Special Issue will focus on recent advances in the biology and molecular pathogenesis of Trypanosoma cruzi infection and promising new therapeutic candidates for Chagas disease and their challenges.

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Prof. Dr. Hinh Ly

Department of Veterinary and Biomedical Sciences, College of Veterinary Medicine, University of Minnesota, Saint Paul, MN 55108, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS. and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
