

Special Issue

Allergy and Immunotherapy

Message from the Guest Editor

Currently, pharmacotherapy—mainly with topical steroids and antihistamines—can relieve allergic patients from various symptoms. Several biologics that control specific responsible molecules and directly suppress allergic reactions have recently become available. Even in the current era, the significance of AIT which modifies the natural history of allergic diseases seems to be prominent. In this Special Issue, we would like to request the submission of original papers and reviews regarding AIT for allergic diseases. We look forward to publishing your latest research focusing on, but not limited to, mechanisms of the effectiveness, long-term effects, and preventing the onset of asthma by AIT.

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Prof. Dr. Hinh Ly

Department of Veterinary and Biomedical Sciences, College of Veterinary Medicine, University of Minnesota, Saint Paul, MN 55108, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
