

Special Issue

Host Defense Against Bacteria

Message from the Guest Editor

Anti-bacterial host defense encompasses a diverse and clinically important set of interactions between bacteria and their host. Bacteria can range from mutualistic microbiota to highly virulent pathogens. Different species and strains have evolved unique mechanisms to adapt to their host environment, and continual adaptation to environmental exposures such as antibiotics presents an ongoing challenge for medicine. Bacterial virulence strategies often reveal important mammalian immune mechanisms, which span all aspects of innate and adaptive immunity. For this Special Issue of *Pathogens*, we invite you to submit a review article related to host defense against bacteria that elucidates emerging paradigms regarding interactions between medically relevant bacteria and their human hosts.

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Prof. Dr. Hinh Ly

Department of Veterinary & Biomedical Sciences, University of Minnesota, Twin Cities, MN, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
