Latest Advances in Human Papillomavirus (HPV) Research

Message from the Guest Editors

Human papillomavirus (HPV) causes a range of diseases from benign anogenital warts to anogenital cancers, particularly cervical cancer. HPV was first discovered to cause cervical cancer in the 1980s, and since then, there have been several major scientific breakthroughs that have led to the development and implementation of highly effective prophylactic HPV vaccines, cervical cancer screening programs, and treatment of cervical lesions. These important discoveries build upon key basic science research and technological advancement that has enabled novel discoveries within HPV research. In 2018, the Director-General of the World Health Organization made a pledge to eliminate cervical cancer as a public health problem within the next century and outlined a strategy encompassing HPV vaccination, screening, and treatment. This Special Issue aims to present the latest research into HPV in the hope that it will contribute new knowledge to the field as well as ultimately aid in achieving the cervical cancer elimination goal.

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Prof. Dr. Hinh Ly

Department of Veterinary & Biomedical Sciences, University of Minnesota, Twin Cities, MN, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
