

## Special Issue

# Bacteria Involved in Ruminant Mastitis

### Message from the Guest Editor

Mastitis in ruminants is caused by a variety of bacteria. Recent advances in microbiology and the application of novel techniques for the study of microorganisms have made the in-depth study of the causal agents of the infection, and in turn the elucidation of aspects of the infection, possible. The Special Issue will focus on the causal agents of mastitis in small and large ruminants and will include clinical and laboratory studies focusing on these bacteria. Original research articles and review manuscripts are welcome.

## About the Journal

### Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

*Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
