

## Special Issue

# Pediatric Oncology and Chemotherapy: Challenges and Strategies

### Message from the Guest Editor

Cancer is one of the leading causes of death among both adults and children. In the United States, pediatric oncology gradually developed in the years following the 1950s. To date, chemotherapy is still one of the major therapeutic strategies in cancer treatment.

Chemotherapy often causes serious side effects, which potentially contribute to morbidity and affect patients' life quality. Such side effects could cause more serious subsequences in children.

## About the Journal

### Message from the Editor-in-Chief

*Pediatric Reports (PR)* journal is a publishing platform for all topics concerning pediatrics, from basic research to bedside care. We aim at targeting a composite audience, from experienced pediatricians to young residents and fellows. Clinical observation of unusual cases will find their tribune, as well as trial reports and results of research related to diseases that may represent frequent or rare events faced by Pediatricians. We look forward to continuing the work done in the past years by *Pediatric Reports*, but also make the journal grow according to changing expectations and attitudes of both, clinicians and researchers who work for more effective pediatric care.
