Cancer Drugs Treatment and Toxicity 2023

Message from the Guest Editor

Cancer drugs are commonly used to treat tumors. Unfortunately, the majority of cancer drugs (doxorubicin, ponatinib, cisplatin, etc.) induce cardiomyopathy and muscle weakness as a side effect. The exact mechanisms of action of these drugs are far from clear; however, based on current research, it is suggested that increased oxidative stress, inflammation, mitochondrial dysfunction, and cell death are prominent mechanisms involved in the development as well as progression of these diseases. *Pharmaceuticals* is organizing a Special Issue on the topic of cancer drug toxicity and interventions. In this Special Issue, we invite both original and review articles that cover the current concepts of anticancer-drug-induced toxicity in the heart and muscles. These articles can be of a wider scope, including topics such as oxidative stress, cell signaling, cell death, tissue remodeling, inflammation, and other relevant molecular mechanisms that are involved in anticancer-drug-induced cardiac as well as muscle toxicity. We will also welcome any current therapeutic strategies being investigated to attenuate anticancer-drug-induced side effects in tissues.

About the Journal

Message from the Editor-in-Chief

Because of your expertise in the field of drug sciences, I kindly invite you to consider publishing your current work, in the form of a research article or a review, in the open access electronic journal *Pharmaceuticals*. *Pharmaceuticals* is characterized by an active editorial board and a dynamic editorial staff. Manuscripts are peer-reviewed and a final decision is provided to authors within 4–6 weeks after submission. Papers are published on the web immediately after acceptance. For details on the submission process or any other matter, please do not hesitate to contact us. We hope to handle your contribution to *Pharmaceuticals* soon.

Editor-in-Chief

Prof. Dr. Amélia Pilar Rauter

Departamento de Química e Bioquímica (DQB) e Centro de Química Estrutural (CQE), Institute of Molecular Sciences, Faculdade de Ciências, Universidade de Lisboa, Lisboa, Portugal

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
