Virtual Screening of Natural Product Databases for Drug Discovery

Message from the Guest Editors

It is estimated that less than 10% of the world's biodiversity has been evaluated for possible therapeutic applications. Natural products present challenges for drug discovery, which have contributed to a decline in their pursuit by the pharmaceutical industry. Natural products, indeed, are often structurally complex, presenting several hydroxyl and ketone substituents and many chiral centers, and usually have high polarity and molecular weight, which makes them unique and extremely diverse compared to synthetic molecules, but also very difficult to synthesize at a large scale. However, the advent of new technologies has allowed focus on the most promising candidates, thus opening new opportunities for natural products in drug discovery. *In silico* virtual screening is one of the most useful computational methods for filtering large databases of natural compounds. Several virtual screening protocols could be applied to natural product libraries. This Special Issue will cover different aspects of virtual screening methodology and applications, including ligand-, pharmacophore-, and structure-based approaches leading to the identification of hit compounds or to optimized leads.

About the Journal

Message from the Editor-in-Chief

Because of your expertise in the field of drug sciences, I kindly invite you to consider publishing your current work, in the form of a research article or a review, in the open access electronic journal *Pharmaceuticals*.

Pharmaceuticals is characterized by an active editorial board and a dynamic editorial staff. Manuscripts are peer-reviewed and a final decision is provided to authors within 4–6 weeks after submission. Papers are published on the web immediately after acceptance. For details on the submission process or any other matter, please do not hesitate to contact us.

We hope to handle your contribution to *Pharmaceuticals* soon.

Editor-in-Chief

Prof. Dr. Amélia Pilar Rauter

Departamento de Química e Bioquímica (DQB) e Centro de Química Estrutural (CQE), Institute of Molecular Sciences, Faculdade de Ciências, Universidade de Lisboa, Lisboa, Portugal

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
