

## Special Issue

# Quadruplex Nucleic Acid Ligands in Drug Discovery

### Message from the Guest Editor

The four-stranded structures formed by the guanine-rich sequences of nucleic acids (DNA or RNA), termed G-quaduplexes (G4), are emerging as very promising nanostructures in the field of medicine. Their presence in the human genome and in the genome of human pathogens, as well as their involvement in the regulation of several cellular processes, turn these nucleic acid transient structures into promising drug targets. Another quadruplex nucleic acid emerging as a drug target is the i-motif that can be formed in the complementary DNA cytosine-rich strand. In addition, G4-forming oligonucleotides are also promising agents for selective drug delivery and have high applicability in nanotechnology, due to their structural diversity, high stability, and cell permeability. This Special Issue will address the following topics: \* Design and synthesis of quadruplex-binding small molecules and organic–metal complexes; \* Methods to study quadruplex–ligand interactions; \* Studies demonstrating the applicability of quadruplex ligands in drug discovery and in health-related nanotechnology.

## About the Journal

### Message from the Editor-in-Chief

Because of your expertise in the field of drug sciences, I kindly invite you to consider publishing your current work, in the form of a research article or a review, in the open access electronic journal *Pharmaceuticals*.

*Pharmaceuticals* is characterized by an active editorial board and a dynamic editorial staff. Manuscripts are peer-reviewed and a final decision is provided to authors within 4–6 weeks after submission. Papers are published on the web immediately after acceptance. For details on the submission process or any other matter, please do not hesitate to contact us.

We hope to handle your contribution to *Pharmaceuticals* soon.

---

### Editor-in-Chief

Prof. Dr. Amélia Pilar Rauter

Departamento de Química e Bioquímica (DQB) e Centro de Química Estrutural (CQE), Institute of Molecular Sciences, Faculdade de Ciências, Universidade de Lisboa, Lisboa, Portugal

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
