Bioactive Compounds as Bacterial Efflux Pump Inhibitors

Message from the Guest Editors

Antibiotic resistance is responsible for approximately 700,000 yearly deaths worldwide. Therefore, managing infections caused by resistant bacteria and reducing the associated morbidity and mortality rates currently represent a significant challenge in public healthcare. Efflux pumps (EP) are cell membrane proteins that actively mediate the extrusion of dangerous compounds in various cells. In the context of antibiotic resistance, efflux pump expression stands out for the widespread occurrence among resistant bacterial strains, leading to the lack of effectiveness of a significant number of antibiotics. A large body of research has demonstrated that compounds of either synthetic or natural origin can potentiate the efficacy of conventional antibiotics against EP-overexpressing strains. Therefore, the discovery of bioactive compounds capable of acting as bacterial efflux pump inhibitors represents a promising strategy for combatting antibiotic resistance. Hence, we welcome research demonstrating the effectiveness of fully characterized bioactive compounds as efflux pump inhibitors and their impact on antibiotic resistance, through in vivo, ex vivo in vitro, and in silico testing.

About the Journal

Message from the Editor-in-Chief

Because of your expertise in the field of drug sciences, I kindly invite you to consider publishing your current work, in the form of a research article or a review, in the open access electronic journal *Pharmaceuticals*. *Pharmaceuticals* is characterized by an active editorial board and a dynamic editorial staff. Manuscripts are peer-reviewed and a final decision is provided to authors within 4–6 weeks after submission. Papers are published on the web immediately after acceptance. For details on the submission process or any other matter, please do not hesitate to contact us. We hope to handle your contribution to *Pharmaceuticals* soon.

Editor-in-Chief

Prof. Dr. Amélia Pilar Rauter

Departamento de Química e Bioquímica (DQB) e Centro de Química Estrutural (CQE), Institute of Molecular Sciences, Faculdade de Ciências, Universidade de Lisboa, Lisboa, Portugal

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
