Special Issue

Discovery of Natural Product-Based Amyloid Inhibitors

Message from the Guest Editor

In recent years, increasing interest has been focused on plant polyphenols not only for their antioxidant properties but also due to their ability to inhibit amyloid fibril growth, to favor their disaggregation and to destabilize preformed fibrils. Polyphenols have been shown to abrogate self-assembly of several peptides/proteins associated with amyloid diseases (systemic or neurodegenerative diseases) in different ways depending on the molecular features of either component. The findings reported in the last decade are starting to help to decipher the complex relations between plant polyphenols and protein amyloid aggregation establishing an increasingly solid molecular basis for the healthy effects of these molecules. In fact, several clinical trials have confirmed that most of the benefits of the Mediterranean/Asian diets can be traced back to the presence of significant amounts of these molecules, even though, in some cases, contradictory results have been reported, which highlights the need to provide further investigation on the biochemical, molecular and cell biology modifications by plant polyphenols in models of amyloid diseases.

About the Journal

Message from the Editor-in-Chief

Because of your expertise in the field of drug sciences, I kindly invite you to consider publishing your current work, in the form of a research article or a review, in the open access electronic journal *Pharmaceuticals*. *Pharmaceuticals* is characterized by an active editorial board and a dynamic editorial staff. Manuscripts are peer-reviewed and a final decision is provided to authors within 4–6 weeks after submission. Papers are published on the web immediately after acceptance. For details on the submission process or any other matter, please do not hesitate to contact us.

We hope to handle your contribution to *Pharmaceuticals* soon.

Editor-in-Chief

Prof. Dr. Amélia Pilar Rauter

Departamento de Química e Bioquímica (DQB) e Centro de Química Estrutural (CQE), Institute of Molecular Sciences, Faculdade de Cièncias, Universidade de Lisboa, Lisboa, Portugal

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
