Message from the Guest Editor

Dear Colleagues,

Increasing the localization of drugs to hematologic or solid tumor cancer cells by targeted drug delivery holds great promise to improve the treatment of cancer with conventional and nonconventional drugs. Given the broad range of drug types, cancers, and tumor heterogeneities, the successful clinical application of targeted drug delivery will continue to require the preclinical development of multiple drug delivery approaches for selection and further clinical development.

This Special Issue seeks to highlight original research articles and reviews on the preclinical development of targeted drug delivery approaches to improve the pharmacotherapy of cancer with conventional and nonconventional drugs. Research areas include any approaches that improve the treatment of preclinical cancer models with small-molecule (<900 Da) or macromolecule drugs (e.g., biomolecules) (e.g., increase potency and/or efficacy, decrease toxicity) by increasing the localization to the site of action in hematologic cancer cells or solid tumor/tumor-associated cells in primary and/or secondary tumors.

Message from the Editor-in-Chief

Pharmaceutics (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
