Nanoparticles: Technology and Therapeutic Applications in Human Infectious and Parasitic Diseases

Message from the Guest Editors

Infectious diseases are responsible for high morbidity and mortality worldwide. Recent advances in nanotechnology have shown that nanoparticles are acquiring great potential for their medical applications in the treatment of diseases caused by viruses, bacteria, fungi and parasites, as they can be useful to overcome the problems of conventional therapeutics and increase the effectiveness of treatment. This Special Issue aims to disseminate and learn about the potential applications of nanoparticles in the prevention, diagnosis and treatment of parasitic and infectious diseases.
