Nano-Assemblies Based on Biomacromolecules to Overcome Cancer Drug Resistance

Message from the Guest Editor

This Special Issue will summarize various mechanisms of nano-assembly utilization overcoming cancer drug resistance. The roles and research progress of typical biomacromolecules (such as polysaccharides, proteins and nucleic acids) in nano-assemblies capable of overcoming cancer drug resistance will be described, along with the potential challenges and prospects of the clinical application of biomacromolecule-based nano-assemblies. We welcome both original research articles and reviews. We look forward to receiving your contributions.
