

## Special Issue

# Targeted Drug Delivery Strategies for Infectious Diseases

### Message from the Guest Editors

The development of new treatment options is essential, focusing on therapies that are highly effective, less toxic, and affordable. In this context, a promising approach is the development of drug-specific delivery systems that target the desired site of action, utilizing recent advances in biomaterials, including liposomes, dendrimers, nanotubes, nanoshells, and others. This Special Issue will provide readers with an overview of the current advances in targeted drug delivery strategies for infectious diseases. Research articles and comprehensive reviews are welcome.
