# Choline kinase, a Target with Broad-Spectrum Therapeutic Potential: Opportunities and Challenges

### Message from the Guest Editor

Choline kinase is an enzyme involved in lipid metabolism that has been shown to be directly related to tumor progression, being studied both as an effective therapeutic target and also in cancer prognosis. However, this enzyme is also involved in other pathologies of an inflammatory (rheumatoid arthritis), bacterial, and parasitic type and, recently, its relationship with the expression of PD-L1 immune control points. All this has made this enzyme an attractive target for study. This Special Issue will cover the recent advances in choline kinase implications with different pathologies, including drug design and drug delivery and biological studies that demonstrate their relevance in various therapeutic fields.

## About the Journal

### Message from the Editor-in-Chief

*Pharmaceutics* (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceuticals and biopharmaceuticals. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.7 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the second half of 2025).
