The Role of Community Pharmacists in Public Health

Message from the Guest Editor

It is a known fact that community pharmacists are one of the most frequently visited healthcare professionals, and that community pharmacies are the first port of call for the general public. Pharmacy has undergone remarkable changes, and community pharmacists have made an effort to expand their traditional role of dispensing medication by providing more patient-oriented and public health-related interventions. Community pharmacy now offer a range of services in relation to health promotion and disease prevention, such as smoking cessation, weight management, and vaccinations. They also offer services for health improvement which focus on medication adherence and optimising medicines use for long-term conditions, and play a role in disease screening and early detection. Recently, technological advances may have further changed the traditional model of service delivery and have potentially expanded the reach of community pharmacy through the use of virtual consultations.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Pharmacy* (ISSN 2226-4787). *Pharmacy*, an international scientific open access journal on pharmacy education and practice, is published by MDPI online quarterly. *Pharmacy* is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Jon Schommer
