Message from the Guest Editors

The present interconnectedness of individuals, societies and markets is unprecedented - the world has become hyper-connected and extremely interdependent. As a consequence, a global society has emerged, and everything is influenced ubiquitously.

The establishment of interdependencies between individuals is fundamental for the creation of social systems. In doing so, individuals inevitably lose part of their autonomy in pursuit of a collective purpose. The current digital societies and lack of physical distances are changing traditional paradigms. Philosophical reflections are required to frame and understand their consequences and effects.

This special issue will explore the behavior of individuals and the properties of social systems in the age of hyper-connectivity. Aspects of human behavior such as the sense of purpose, autonomy or agency, and the capacity for acting independently or collectively are affected. Are humans becoming more constrained? Are their actions decoupling from one another? What sort of social dynamics are expected next?

Keywords: digital humanism; social networks; complexity; globalization; emergent behaviors; agency; autonomy; social sciences

Message from the Editor-in-Chief

Philosophies searches for the syntheses of philosophical and scientific inquiries. It promotes philosophical work that is derived from the experience of diverse scientific disciplines and cultures. Multiple philosophies already exist — those of logic, information, computation, natural and artificial life, natural or artificial intelligence, complexity, technology, etc. Our mission is not to abandon philosophical roots and traditions of inquiry, but to promote the development of philosophical foundations and effective methodologies derived from diverse scientific explorations, and intended to enhance these explorations as to generate deeper and more holistic knowledge. Innovation may also be achieved through the cultural dimension. Other cultures can offer from their heritage a diversity of resources for exploration; these resources can also contribute to the emergent synthesis of philosophical inquiry.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), PhilPapers, and many other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 20.4 days after submission; acceptance to publication is undertaken in 6.2 days (median values for papers published in this journal in the first half of 2021).
