Message from the Guest Editors

A large part of climate change ethics is focused on the distribution of responsibilities between countries. Considerably less attention has been given to the corresponding questions on the sub-national level.

The aim of this Special Issue is to somewhat mitigate this by focusing on the distribution of responsibilities for climate change mitigation and adaption between individuals, corporations, NGOs, municipalities, counties, and other sub-national levels.

Message from the Editor-in-Chief

Philosophies searches for the syntheses of philosophical and scientific inquiries. It promotes philosophical work that is derived from the experience of diverse scientific disciplines and cultures. Multiple philosophies already exist — those of logic, information, computation, natural and artificial life, natural or artificial intelligence, complexity, technology, etc. Our mission is not to abandon philosophical roots and traditions of inquiry, but to promote the development of philosophical foundations and effective methodologies derived from diverse scientific explorations, and intended to enhance these explorations as to generate deeper and more holistic knowledge. Innovation may also be achieved through the cultural dimension. Other cultures can offer from their heritage a diversity of resources for exploration; these resources can also contribute to the emergent synthesis of philosophical inquiry.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), PhilPapers, and other databases.

Journal Rank: CiteScore - Q1 (*Philosophy*)
