Message from the Guest Editor

The objective of this Special Issue is to show the advances in research on the concept of solidarity and its implications for current bioethics, including conflicts with autonomy and justice. More specifically, the aim of this Special Issue is a better understanding of the meanings and applications of solidarity in various public health policies, contributing to an adequate definition, elaborating, applying, and evaluating the health policies in which the idea of solidarity intervenes, and analyzing the role that solidarity can and should play in the context of global health attending to the various conflicts that it raises, such as the ethical demands of the special obligations towards family members, or the duties of justice beyond national states (the debate on global justice).

Message from the Editor-in-Chief

Philosophies searches for the syntheses of philosophical and scientific inquiries. It promotes philosophical work that is derived from the experience of diverse scientific disciplines and cultures. Multiple philosophies already exist – those of logic, information, computation, natural and artificial life, natural or artificial intelligence, complexity, technology, etc. Our mission is not to abandon philosophical roots and traditions of inquiry, but to promote the development of philosophical foundations and effective methodologies derived from diverse scientific explorations, and intended to enhance these explorations as to generate deeper and more holistic knowledge. Innovation may also be achieved through the cultural dimension. Other cultures can offer from their heritage a diversity of resources for exploration; these resources can also contribute to the emergent synthesis of philosophical inquiry.
