

# Special Issue

## Semiotics and Phenomenology: New Perspectives

### Message from the Guest Editors

We envision this Special Issue as a forum for fruitful dialogue between scholars who mostly identify phenomenology or semiotics, but it is open to the other tradition, or even to those who already view themselves as involved in blends such as phenomenological semiotics or semiotic (or structural) phenomenology. Accordingly, we invite original research articles that address topics such as the following, without being limited to them:

- Theoretical discussions of relations between Husserlean and Peircean concepts, such as intentionality and semiosis;
- Interactions between pre-signitive and signitive intentionality;
- Interactions between language and consciousness;
- The dialectics of spontaneity and sedimentation;
- Elucidating a particular sign system like language, gesture or depiction with the help of phenomenology;
- Empirical domains of meaning making (e.g., education, technology, design) approached within a phenomenological semiotics.

We look forward to receiving your contributions!

## About the Journal

### Message from the Editor-in-Chief

*Philosophies* searches for the syntheses of philosophical and scientific inquiries. It promotes philosophical work that is derived from the experience of diverse scientific disciplines and cultures. Multiple philosophies already exist— those of logic, information, computation, natural and artificial life, natural or artificial intelligence, complexity, technology, etc. Our mission is not to abandon philosophical roots and traditions of inquiry, but to promote the development of philosophical foundations and effective methodologies derived from diverse scientific explorations, and intended to enhance these explorations as to generate deeper and more holistic knowledge. Innovation may also be achieved through the cultural dimension. Other cultures can offer from their heritage a diversity of resources for exploration; these resources can also contribute to the emergent synthesis of philosophical inquiry.
