Special Issue

Photochemistry of Agri and Food Products: Spectroscopy and Optical Sensors

Message from the Guest Editors

This Special Issue focuses on the application of advanced spectroscopy and optical sensor technologies to better understand and optimize the biochemical processes, composition, and quality control of agri-food products. Optical spectroscopy comprises a range of powerful techniques, including luminescence spectroscopy, Raman spectroscopy, Fourier-transform infrared (FTIR) spectroscopy, and UV–near-infrared (NIR) spectroscopy, all integral to the photochemical analysis of agri-food products. The principles underlying these techniques include the interaction of light with matter, where light is absorbed, transmitted, emitted, or scattered, revealing detailed information about molecular structure and concentration. These methods aim to detect and monitor biochemical compounds such as pigments, proteins, lipids, and carbohydrates, offering insights into their roles in biological systems and their implications for food quality and safety.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Dirk M. Guldi
Department of Chemistry and Pharmacy, Interdisciplinary Center for Molecular Materials, Friedrich-Alexander-Universitaet Erlangen-Nuernberg, 91052 Erlangen, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), EBSCO, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.4 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
