Message from the Guest Editors

Dear Colleagues,

Electrical power transmission is an essential function of equipment. Although wiring, batteries, and energy harvesting have been used, these methods have various problems. By solving the problem of power transmission, society can be further developed with new equipment and new services.

We have decided to publish a Special Issue that contains the latest results. Although this field is related to energy and photonics technologies, it is configured by a wide range of technologies such as materials, devices, systems, and applications as described above. This Special Issue will target papers that are related widely to individual devices like light sources and light-receiving devices, functional integration, systems, and applications of optical power transmission.
