## Atomic and Molecular Processes in Strong Laser Fields

### Message from the Guest Editor

Thanks to advances in high-power femtosecond lasers, several decades ago, it became possible to study the processes of laser–matter interaction at field strengths approaching the binding force experienced by an electron inside atoms or molecules. In recent years, many experimental results have been obtained that expand our understanding of processes in strong fields and illuminate hitherto unknown aspects of them. In addition to their fundamental scientific significance, these advances have contributed to the expansion of experimental tools, including those for probing and controlling ultrafast processes in matter on timescales down to attoseconds. This Special Issue aims to present the latest advances in the study of strong-field laser–matter interactions, including, among others, such topics as: - Coulomb effects and Resonance effects; - Multielectron effects; - Nondipole effects; - Time delays in ionization; - Chirality sensitive strong-field laser–matter interactions; - Ultrafast nonlinear spectroscopy; - High harmonic spectroscopy; - Quantum optical aspects of strong-field processes;

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Photonics* (ISSN 2304-6732). *Photonics* is an online open access journal covering both the fundamental and applications of optics and photonics. *Photonics* strives to provide an avenue to allow authors to disseminate their scientific findings—both theoretical/ simulations and experimental works—in highly accessible peer-reviewed journal publications. The manuscript in *Photonics* will be handled with quick turnaround production processing time. We welcome authors to submit their manuscripts for publications in *Photonics*. Our goal in *Photonics* is to enable fast dissemination of high impact works to the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q2 (Instrumentation)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.8 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
