Optical Vortex: Fundamentals and Applications

Message from the Guest Editor

An optical vortex refers to the spatial modes of light that are featured with axial-phase singularity. This topological structure arises from its helicoidal phase front with topological charge ℓ around the phase singularity. It is also referred to as the optical angular momentum (OAM) of $\ell\hbar$, with respect to the spin angular momentum (SAM) ($\pm\hbar$ per photon) associated with the photon polarization. Light fields carrying OAM have opened new perspectives in the optical research realm due to various fascinating attributes, such as the optical tweezer, optical microscopy and metrology, quantum communication, lasing, etc. The novel OV properties characterized by high-order Gaussian beam modes, such as the Laguerre–Gaussian (LG) modes, Hermite–Gaussian (HG) modes, and Ince–Gaussian (IG) modes, also spawn tremendous research interest in the high-order integer/fractional OAM and its orthogonal space spans. Vortex beam generation techniques have also been developed thoroughly for the past three decades. We are pleased to invite you to contribute to this Special Issue on the fundamentals and applications of an optical vortex.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Photonics* (ISSN 2304-6732). *Photonics* is an online open access journal covering both the fundamental and applications of optics and photonics. *Photonics* strives to provide an avenue to allow authors to disseminate their scientific findings—both theoretical/ simulations and experimental works—in highly accessible peer-reviewed journal publications. The manuscript in *Photonics* will be handled with quick turnaround production processing time. We welcome authors to submit their manuscripts for publications in *Photonics*. Our goal in *Photonics* is to enable fast dissemination of high impact works to the scientific community.

Editor-in-Chief

School of Electrical and Electronic Engineering (EEE), The University of Adelaide, Adelaide, SA 5005, Australia

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q2 (Instrumentation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.8 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
