Special Issue

Optical Solitons in an Inhomogeneous Fiber: From Control to Applications

Message from the Guest Editors

Optical soliton generation, manipulation, and applications have received significant attention due to their potential applications in various domains. Optical soliton transmission in several nonlinear waveguides, such as optical fibers, metamaterials, and photonic crystal fiber, have been experimentally and theoretically investigated as a way to explore their dynamical behaviors. In this context, we welcome research and review articles dealing with nonlinear Schrödinger models, with the aim of providing readers with an improved understanding of nonlinear optical soliton transmission in various nonlinear optical systems. Topics of interest include, but are not limited to:

- Nonlinear Schrödinger models;
- Dynamical properties of optical solitons;
- Optical soliton control and management;
- Photonic crystal fiber;
- Modulation instability in nonlinear waveguides;
- Supercontinuum generation in nonlinear optical fibers;
- Applications of optical solitons in photonics.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Photonics* (ISSN 2304-6732). *Photonics* is an online open access journal covering both the fundamental and applications of optics and photonics. *Photonics* strives to provide an avenue to allow authors to disseminate their scientific findings—both theoretical/ simulations and experimental works—in highly accessible peer-reviewed journal publications. The manuscript in *Photonics* will be handled with quick turnaround production processing time. We welcome authors to submit their manuscripts for publications in *Photonics*. Our goal in *Photonics* is to enable fast dissemination of high impact works to the scientific community.

Editor-in-Chief

Prof. Dr. Nelson Tansu
School of Electrical and Electronic Engineering (EEE), The University of Adelaide, Adelaide, SA 5005, Australia

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q2 (Instrumentation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.8 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
