Adaptive Optics: Technology and Applications

Message from the Guest Editors

Adaptive Optics (AO) is commonly used in ground-based telescopes to restore spatial resolution in astronomical observations, which is lost due to the presence of the atmosphere. The very demanding requirements of these new, complex facilities have many synergies with other applications, such as Free-Space Optical Communications through the atmosphere. The benefits of optical links over radiofrequencies are namely the possibility to transfer information at a very high data rate, the very large available bandwidth, the security of the data transfer, and the required size, weight, and power for equipment. These benefits come at the cost of significant technical challenges that need solving. When crossing the atmosphere, optical beams suffer multiple distortions such as beam wandering, scintillation, phasefront distortion, and beam spreading. To mitigate these effects, several techniques such as adaptive optics, spatial diversity, and aperture averaging have been proven to be effective. These methods can also benefit other types of applications involving light propagation through the atmosphere, such as Space Surveillance and Tracking (SST).

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Photonics* (ISSN 2304-6732). *Photonics* is an online open access journal covering both the fundamental and applications of optics and photonics. *Photonics* strives to provide an avenue to allow authors to disseminate their scientific findings—both theoretical/ simulations and experimental works—in highly accessible peer-reviewed journal publications. The manuscript in *Photonics* will be handled with quick turnaround production processing time. We welcome authors to submit their manuscripts for publications in *Photonics*. Our goal in *Photonics* is to enable fast dissemination of high impact works to the scientific community.

Editor-in-Chief

Prof. Dr. Nelson Tansu

School of Electrical and Electronic Engineering (EEE), The University of Adelaide, Adelaide, SA 5005, Australia

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Optics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2024).
