Application of Adaptive Optics Theory and Technology in Optical Wireless Communication

Message from the Guest Editor

Optical wireless communication is a new technology that uses a laser as the carrier to transmit audio, video, image and other information. Optical wireless communication takes the atmosphere as the transmission medium. In the transmission process of laser signal, the beam wavefront fluctuates randomly under the influence of atmospheric turbulence, resulting in beam expansion, phase fluctuation, and beam drift, which seriously affects the quality of the received optical signal, and increases the bit error rate and reduces the effectiveness of communication. Adaptive optics is a comprehensive science integrating optics, mechanics and electronics, which can suppress the wavefront distortion of optical signals in atmospheric turbulence transmission. The application of adaptive optics technology to wireless optical communication systems has great potential to suppress the influence of atmospheric turbulence.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Photonics* (ISSN 2304-6732). *Photonics* is an online open access journal covering both the fundamental and applications of optics and photonics. *Photonics* strives to provide an avenue to allow authors to disseminate their scientific findings—both theoretical/ simulations and experimental works—in highly accessible peer-reviewed journal publications. The manuscript in *Photonics* will be handled with quick turnaround production processing time. We welcome authors to submit their manuscripts for publications in *Photonics*. Our goal in *Photonics* is to enable fast dissemination of high impact works to the scientific community.

School of Electrical and Electronic Engineering (EEE), The University of Adelaide, Adelaide, SA 5005, Australia

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q2 (Instrumentation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2025).
