Polymer Optical Fibre

Message from the Guest Editors

Polymer optical fibers (POF) have been proved during the last years as very attractive fibers due to large sensitivity to external environment, biocompatibility and easy handling amongst other advantages. Short distance telecommunications and sensing have been identified as fields with an increasing number of potential applications. Local area networks and interconnection based on polymer optical fibers have been demonstrated with successful data rates whereas further work on new materials and components is identified as a promising field for increasing the scope of these fibers. Moreover, sensors based on polymer optical fiber technology have been proposed a long time ago, nonetheless, they are currently under dynamic and fruitful fundamental and applied research with upcoming new applications and developments. In this context, polymer optical fiber technology is a growing research and application area at the intersection of health and general engineering. Topics include, but not limited, theoretical and experimental original work on the following:

- polymer fibers
- microstructured fibers
- POF sensors
- POF networks
- POF components

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Photonics* (ISSN 2304-6732). *Photonics* is an online open access journal covering both the fundamental and applications of optics and photonics. *Photonics* strives to provide an avenue to allow authors to disseminate their scientific findings—both theoretical/ simulations and experimental works—in highly accessible peer-reviewed journal publications. The manuscript in *Photonics* will be handled with quick turnaround production processing time. We welcome authors to submit their manuscripts for publications in *Photonics*. Our goal in *Photonics* is to enable fast dissemination of high impact works to the scientific community.

Editor-in-Chief

Prof. Dr. Nelson Tansu

School of Electrical and Electronic Engineering (EEE), The University of Adelaide, Adelaide, SA 5005, Australia

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q2 (Instrumentation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.8 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
