Microbial Interactions in the Phycosphere

Message from the Guest Editor

The phycosphere represents one of the most dynamic and ecologically critical microenvironments in aquatic ecosystems. As primary producers, algae form the base of aquatic food webs, and their interactions with co-occurring associated microbes (including bacteria, archaea, viruses, fungi, and protozoa) shape diverse processes, ranging from global biogeochemical cycling to phytoplankton bloom dynamics, as well as the ecological health of marine and freshwater habitats. Despite decades of research, the complex nature of these interactions—their molecular mechanisms, ecological consequences, and responses to environmental changes—remains incompletely resolved. It is within this context that we are launching this Special Issue, “Microbial Interactions in the Phycosphere”.

Guest Editor

Dr. Qiao Yang

Laboratory of Phycosphere Microbiology, Zhejiang Ocean University, Zhoushan, China

Deadline for manuscript submissions

30 March 2027

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Peer Schenk

1. Plant-Microbe Interactions Laboratory, School of Agriculture and Food Sustainability, The University of Queensland, Brisbane, QLD 4072, Australia

2. Sustainable Solutions Hub, Global Sustainable Solutions Pty Ltd., Brisbane, QLD 4105, Australia

3. Centre for Bioinnovation, The University of the Sunshine Coast, Sippy Downs, QLD 4556, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases.

Journal Rank:

JCR - Q1 (Marine and Freshwater Biology) / CiteScore - Q1 (Agricultural and Biological Sciences (miscellaneous))
