Special Issue

Statistical Approaches in High Energy Physics

Message from the Guest Editors

The vast amount of data from high energy collisions has opened up an opportunity toward further understanding of fundamental aspects in high-energy physics, in particular of the nonperturbative regime of quantum chromodynamics (QCD), the theory of strong interactions. Many phenomenological and theoretical approaches have been formulated for accurate description of the strongly interacting matter where a complex system of excited matter is formed, in order to understand its evolution, hadronization, and freeze-out. The hydrodynamics approach to quark-gluon plasma expansion, the saturation model of color glass condensate, and the hadron resonance gas models are some examples of successful approaches to comprehensive description of the hot and dense system formed in high energy collisions. Statistical methods have been found to be valuable in understanding those mechanisms and to help with building the nonperturbative QCD sector. In this Special Issue, we invite research in the field to present the state-of-the-art of statistical approaches in high energy physics, in particular in the QCD at extreme conditions, hadroproduction, and hot and dense nuclear matter formation.

About the Journal

Message from the Editor-in-Chief

Physics plays a crucial role in our understanding of the world and is of huge significance for the development of other sciences. This ensures that physics is always attracting heightened attention and is at the center of human interest. Physics is devoted to all aspects of physics and looks into news and progress of modern physics, seeking new horizons and future discoveries. The journal aims to provide an advanced forum for discussion of contemporary problems in physics and its development.

Editor-in-Chief

Prof. Dr. Edward Sarkisyan-Grinbaum

- 2. Department of Physics, The University of Texas at Arlington, Arlington, TX 76019, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, INSPIRE, Astrophysics Data System, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25.9 days after submission; acceptance to publication is undertaken in 20.7 days (median values for papers published in this journal in the first half of 2025).
