### Message from the Guest Editors

Dear Colleagues,

Plant lipids are basic structure components in membranes and also play a critical role in the intracellular storage to maintain cellular energy homeostasis. Lipids are constantly recycled and redistributed within a cell. Autophagy is a universal mechanism that facilitates the degradation of unwanted cytoplasmic components in eukaryotic cells. Autophagosomes are double-membrane vesicles newly formed during autophagy to engulf intracellular materials and transport to vacuoles for subsequent degradation. With the improvement of various detection techniques, recent studies have found that there is a relationship and link between lipid and autophagy. This Special Issue, which welcomes original research papers, reviews, perspectives, and opinions, aims to cover a wide spectrum of aspects concerning Lipids and Autophagy in Plants.

Deadline for manuscript  
submissions:

**closed (31 May 2023)**

## Editor-in-Chief

### **Prof. Dr. Dilantha Fernando**

Department of Plant Science,  
University of Manitoba, Winnipeg,  
MB R3T 2N2, Canada

## Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Plant Sciences*) / CiteScore - Q1 (*Plant Science*)
