Plant Cultivation in Recent Stresses

Guest Editor:

Prof. Dr. Berca Mihai

Faculty of Management, Economic Engineering in Agriculture and Rural Development, University of Agronomic Sciences and Veterinary Medicine of Bucharest, 011464 Bucharest, Romania

Deadline for manuscript submissions: closed (20 November 2023)

Message from the Guest Editor

For plants, and especially for agricultural crops, stresses are factors arising from the environment that affect the yield quantity and quality, endangering the food security and safety of people worldwide in the case of cultivated plants. Broadly speaking, the most obvious stresses are generated by climate change, industrial emissions, agriculture, and urbanism. Researchers are now interested in finding scientific and technical solutions related to GEM (genetics-environment-management) in order to provide models for plant resistance to new environmental conditions that also emphasize the possibility of absorbing the excessive amount of carbon from the atmosphere and storing it in soils. To this end, an increase in SOC (soil organic carbon) and the biological activity of the soil are very desirable. In the context of the current energy crisis, specialized research is required to find cheaper and less polluting alternatives for plant cultivation's essential inputs. This Special Issue of Plants aims to bring together the latest discoveries in the field of agriculture while considering the environmental and existential conditions that we are facing.

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB R3T 2N2, Canada

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Plant Science)
