### Message from the Guest Editor

Dear Colleagues,

Plant leaves are the main photosynthetic organs. While some aspects of leaf development are conserved among species, leaf development is extremely flexible and variable. Leaf development as well as the final shape and size of the leaf vary among species and within a given species. Leaf development is a dynamic process that responds to internal and external circumstances, including the developmental state of the plant, and the biotic and abiotic environment. This issue focuses on the mechanism underlying the variability in leaf size and shape within and among species, and the response of leaf development to internal and external cues. Reviews and research papers on these topics are invited.

## Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
