

Special Issue

Genetics of Disease Resistance in Horticultural Crops

Message from the Guest Editor

This Special Issue of *Plants* focuses on understanding the genetics of disease resistance in horticultural crops using conventional and modern technologies. We would like to cover related research topics (e.g., screening for disease resistance, bi-prenatal and association mapping for resistant genes or QTLs, functional studies of resistant genes, and development of molecular markers for selection), providing comprehensive insight to understand genetics for disease resistance in horticultural crops and to breed superior cultivars.

Guest Editor

Dr. Muhammad Irfan Siddique

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
