Plant Metabolomics: Metabolite Responses to Stress

Message from the Guest Editors

Plants are constantly exposed to environmental constraints during their development. These stresses are classified as biotic when they involve living organisms (fungi, bacteria, viruses, nematodes, etc.) or as abiotic when induced by the physico-chemical environment (water deficiency, extreme temperatures, excessive salinity, nutrient deficiency, heavy metals, UV, etc.). Exposure to these different constraints negatively affects plant growth and development and often leads to metabolism reconfigurations that reflect either plant adaptation responses or the detrimental effects of stress. This Special Issue, “Plant Metabolomics: Metabolite Responses to Stress”, welcomes papers exploring the plasticity of the metabolome in response to stress. We welcome the submission of research on plant responses to stress at the metabolite level (non-targeted or targeted approaches) aiming to identify biomarkers of stress tolerance or to better understand the adaptive response of plants under stress conditions.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
