Special Issue

Crop and Soil Management for Sustainable Agriculture

Message from the Guest Editors

The adoption of sustainable crop and soil management systems is essential for maintaining the long-term production capacity of soil; it is also crucial for increasing crop yields in order to meet the global food demands. Soil conservation tillage (such as no-till farming) and integrated production, which combines agricultural, livestock, and forestry activities within the same area, are some of the main strategies that can be utilized for achieving these objectives. This Special Issue of *Plants* presents novel research findings encompassing these sustainable crop systems for improving soil quality and increasing crop yields. This Special Issue will outline the interactions between soil management and plant yields in sustainable crop systems.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
