Emerging Topics in Identification and Biological Studies of Lipid Droplet in Endosymbiotic Algae

Message from the Guest Editors

Lipids are essential biomolecule components in endosymbiotic algae. They are stored in a large amount of spherical organelles called lipid droplets, which are found in all organisms and play important biological roles as signaling molecules and nutrient sources. Various studies have indicated that lipid droplets in endosymbiotic algae can be induced under extreme environmental conditions, including low-nutrient and low-temperature conditions. Considering that the lipid droplets produced by the endosymbiotic algae are not only necessary for themselves, but also for the host, elucidation of lipid droplet proteins, biogenesis formation, as well as cellular and molecular biology mechanisms provides an opportunity for researchers to explore the novel discovery and development of lipid droplet in endosymbiotic algae. This Special Issue invites academics and researchers to submit reviews, original articles, and short communications focusing on lipid droplet identification, biological roles, and molecular functions in endosymbiotic algae. Studies may address lipid droplets biological studies, as well as new aspects of lipid droplets for further novel development in the field.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
