Special Issue

Genetics, Genomics and Breeding of Cereals

Message from the Guest Editor

The global population is estimated to reach nine billion by 2050, creating an increased demand for food. Additionally, food nutrition standards demand the delivery of higher quality products. Cereals account for over 70% of the energy used in food and feed around the world and are important for global food security. However, the production of cereals is constrained by abiotic and biotic stresses. Therefore, in order to produce better yields and higher quality cereal crops, genetic improvements need to be focused on. Advances in cereal genomics have allowed us to tackle the most important stresses and mitigate their effects. These advances are reviewed in the present Special Issue and will help to advance modern agriculture. The understanding of drought, flooding, salinity and metal toxicity effects and their corresponding genetic variants required for tolerance and fungal, bacteria and virus resistance in major cereal crops is fundamental for the success of cereal breeding and food security.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
