Special Issue

Plant Leaf Senescence Regulation Mechanism

Message from the Guest Editors

Leaf senescence is the final and most important stage of leaf development in plants. Leaf senescence is a complex process, and it can be regulated by many genetic and environmental signals. Recently, much progress has been made in leaf senescence, and the related regulation network has been increasingly improved. To better understand leaf senescence in plants, this Special Issue of *Plants* on "Plant Leaf Senescence Regulation Mechanism" mainly assembles original research articles and review papers on plant leaf senescence. In this Special Issue, we focus on, but are not limited to, the novel senescence-associated genes, leaf senescence regulation network, and molecular evolutionary history of leaf senescence in the plant kingdom.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
