Gene Regulatory Mechanisms of Flower and Fruit Development in Plants

Message from the Guest Editor

Flower and fruit development are processes tightly regulated by genes and phytohormones. In the last several decades, an enormous wealth of information and knowledge has been obtained on the developmental processes underlying the formation and development of flowers and fruits in model plants, non-model plants, and crops. The generation, integration, and translation of gene regulatory networks driving development are important goals of many colleagues around the world. Many challenges and opportunities lay ahead for a deep understanding of regulatory networks guiding plant reproductive development. This Special Issue of *Plants* will highlight the function of genes, phytohormones, and gene regulatory networks in flower and fruit development.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
