

Special Issue

Edible Plants

Message from the Guest Editor

Through mechanization tools, fertilization, pesticides, and plant breeding techniques, farming has largely improved productivity over the last 60 years. Yet, although with recent generation technologies hi-tech farmers and horticulturalists are already working to further revolutionize productivity, research work is also becoming increasingly fundamental. Indeed, new hi-tech technologies might further emerge from research integrating edaphoclimatic data with technologies for high plant productivity and quality. In this framework, this Special Issue intends to contribute to our knowledge on innovative technologies applied to edible plants, considering publication articles focused on physiological and biochemical issues, namely monitoring, regulation and metabolic changes.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
