# Special Issue

# New Insights into the Improvement of Forage Crop Species

## Message from the Guest Editors

Forage crops, which typically include various grasses and herbaceous legumes, comprise some of the most economically important crops globally due to their central role in livestock production. However, our ability to enhance livestock operations will be limited by a lack of arable land and the stagnation of yields in conventionally bred forage cultivars, especially under unfavorable growth conditions arising from climate change. As such, there is a critical need for the development of forage cultivars with enhanced yields and/or feed efficiencies, as a means of enabling livestock production in the future. Such endeavours will not only require an intensification in breeding efforts. most likely through a collaborative approach involving traditional, molecular-assisted and biotechnological strategies, but also an advancement in our understanding of the molecular mechanisms driving traits. This Special Issue of Plants invites the submission of articles providing insight into factors underpinning important traits in forage species, as well as the improvement of such traits utilizing approaches ranging from conventional and molecular-assisted breeding to biotechnology.

# **About the Journal**

## Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

### Editor-in-Chief

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB R3T 2N2, Canada

#### **Author Benefits**

### **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

### **Journal Rank:**

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
