Insight into Plant Response to Abiotic Stress: The Role of Glyoxalase Pathway and Antioxidant System

Message from the Guest Editor

Plant growth and crop productivity are strongly influenced by abiotic stresses, such as cold, drought, mineral imbalance, heat, and ozone. As a common consequence of plant exposure to abiotic stresses, the production of reactive oxygen species (ROS) and methylglyoxal (MG) increase. ROS and MG can react with proteins, lipids and nucleic acids, resulting in metabolic dysfunction and death.

This Special Issue will collect novel research papers and original reviews focusing on the response of the glyoxalase system and antioxidant enzymes in plants exposed to abiotic stress, with particular attention to their possible combined regulatory roles in alleviating oxidative damage and increase plant resistance to abiotic stress

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
