

## Special Issue

# Advances in Grapevine Genotyping, Varietal Identification and Germplasm Collections

### Message from the Guest Editors

This Special Issue is focused on the genetics and genomics variability of the *Vitis* germplasm and the use of collections to understand the current status of genetic diversity analysis, the situation of germplasm collections and advancements in researches that connect genes to phenotype and those to be involved in biotic and abiotic stresses. The submission of reviews, research articles, and short communications focused on the above topics is welcome. *Plants* has received an IF of 3.935 and falls into the highest quartile (Q1) in the category 'Plant Sciences'. For further information about this Special Issue, please see:

## About the Journal

### Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
