

Special Issue

Modelling Plant Diseases for Precision Crop Protection

Message from the Guest Editors

Precision crop protection (PCP) is a key component of precision agriculture. Special attention has been paid thus far to the spatial attributes of PCP, exploiting the within-plot variability in the distribution of plant diseases. PCP, however, has a second dimension, which is the time of intervention, which involves moving from calendar- to risk-based applications. Mathematical models are valuable tools for supporting decision-making on whether and when crop management actions are really needed. This Special Issue aims to focus on modelling plant diseases for crop protection purposes. All relevant modelling approaches will be considered, from data-based to process-based models; from a general (e.g., strategic or operational decision making, crop system models) to a specific perspective (e.g., models for specific crops and diseases, models for optimising monitoring activities, predicting disease risk or intervention thresholds and fungicide application). The Special Issue then covers a wide variety of models and modelling approaches or techniques, and has the ambition to provide a wide picture of the potentialities of plant disease models for precision crop protection.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
